Click here...

Your tasks

- » The creative solution of our customers' challenges in order to create real added value from their data
- » Running complex data analyses, data processing, and developing predictive models for our customers based on current statistic methods
- » Acceptance of analytical, organizational and communicative tasks in customer projects
- » Excellent ability to analyze, split and solve issues
- » Readiness for sporadic business trips and very good written and spoken English skills

Your qualification

- » Verified relevant scientific expertise in form of a selection of your publications (up to three)
- » Experience in processing and analyzing real (customer) data
- » Experience in Python and Python libraries (Pandas, SciPy, Scikit-Learn ...)
- » Profound knowledge in statistics and experience in its application
- » Practical experience in machine learning applications, such as text mining, time series analysis or linear models
- » A challenge in one of the most exciting fields of the present and in a key function of the future
- » A structured initial training based on your previous knowledge, as well as a continuous and versatile professional development
- » Freedom for the creative shaping of important innovations and the development of own ideas

We are looking forward to your meaningful application under consideration of your earliest starting date and your salary demands via E-Mail to our Recruiting Manager:
